3 Reliability Test

Before mass production of smart screens, a series of procedural reliability tests need to be conducted according to actual application requirements and product specification control standards to ensure product quality.

3.1 ESD Test

Test temperature: 25°C

Test process: the product was placed on the test bench to perform contact and air discharge in turn of the serial screen iron frame and display area as shown in Fig.4.1 below. During the experimental process, it was observed whether the screen is dead, black, white, splash, or reboot. According to the experiment results, the performance is in line with the criteria GB/T 17626.2 B level and above.

4.1 Electrostatic discharge test

Discharge Type	Discharge Value	Result
Contact discharge	$\pm 4KV$	Normal operation
Air discharge	$\pm 4KV$	Normal operation

3.2 High and Low Temperature Test

Test temperature:-20~70℃

Test process: the product will be placed obliquely in the high and low temperature test chamber for 12h for 20 on and off cycles. Then it will be check at room temperature after power on for the appearance and function, CTP offset situation, jumping point, page random switching and failure.

Temperature	Result

```
#include "sys.h"
sbit LED1 = P1^0;
sbit KEY1 = P1^1;
//Pin initialization
void io_init()
{
    PORTDRV = 0x01;//Driving current is 8mA
    P1MDOUT |= 0x01;//Set P1.0 as output to drive LED1 light
    P1MDOUT &= 0xFD;//Set P1.1 as input to read the voltage level change of the pin
}
void main(void)
{
    u16 cnt_1ms;
    u16 key1_sta;//Store the voltage level state of the KEY1 pin
    sys_init();//System initialization
    io_init();//Pin initialization
    cnt_1ms = 0;
    key1_sta = KEY1;
    while(1)
    {
        cnt_1ms++;
        sys_delay_ms(1);// Delay sub-function, LED1 blinks every 500ms.
        if(cnt_1ms==500)
        {
            LED1 = !LED1;
            cnt_1ms = 0;
        }
        //If the voltage level of the pin has changed, it will be updated in the interface
        if(key1_sta!=KEY1)
        {
            key1_sta = KEY1;
            sys_write_vp(0x1000,(u8*)&key1_sta,1);
        }
    }
}
```

    sys_init();//System initialization
    uart2_init(115200);//Initialize serial port 2
    while(1)
    {
        if(uart2_rx_sta&UART2_PACKET_OK)//Received serial packet
        {
            len = uart2_rx_sta&UART2_PACKET_LEN;//Get the length of the serial packet without "\r\n"or "\n" terminator
            uart2_buf[len++] = 0;//Add 2 empty strings at the end
