

Features and Benefits

- **BiCMOS Technology**
- **Wide Operating Voltage Range:**
Supply Voltage 2.8~24V
- **Specified Operating Temperature**
Range: From -40°C~150°C
- **Low Operating Current:** 2.3mA
- **Lead Free Package**
Flat TO-92, SOT-23
- **Open Drain Output**
- **Reverse Battery Protection**
- **RoHS Compliant:**2011/65/EU

Applications

- **Solid-state Switch**
- **Speed Detection**
- **Angular Position Detection**
- **Proximity Detection**

Part number	Description
MT3303A-EN	Flat TO-92 package, bulk packaging (1000pcs/bag)
MT3303AT-EN	SOT-23 package, tape and reel packaging(3000pcs/bag)

General Description

The MT3303-EN family are Hall-effect omni-polar switch designed in mixed-signal technology. The Hall IC internally includes a voltage regulator for operation with supply voltage of 2.8 to 24V, a dynamic offset cancellation system, a Schmitt trigger and an open-drain output driver, all in a single package.

As to its wide operating voltage range and extended choice of temperature range, it is quite suitable for use in automotive, industrial and consumer applications. It also includes an anti-reverse bias block to prevent from reverse bias condition.

MT3303-EN series provide a variety of packages to customers: SOT-23 for surface mount and flat TO-92 for through-hole mount. All packages are RoHS compliant.

Definition of Magnetic Parameters

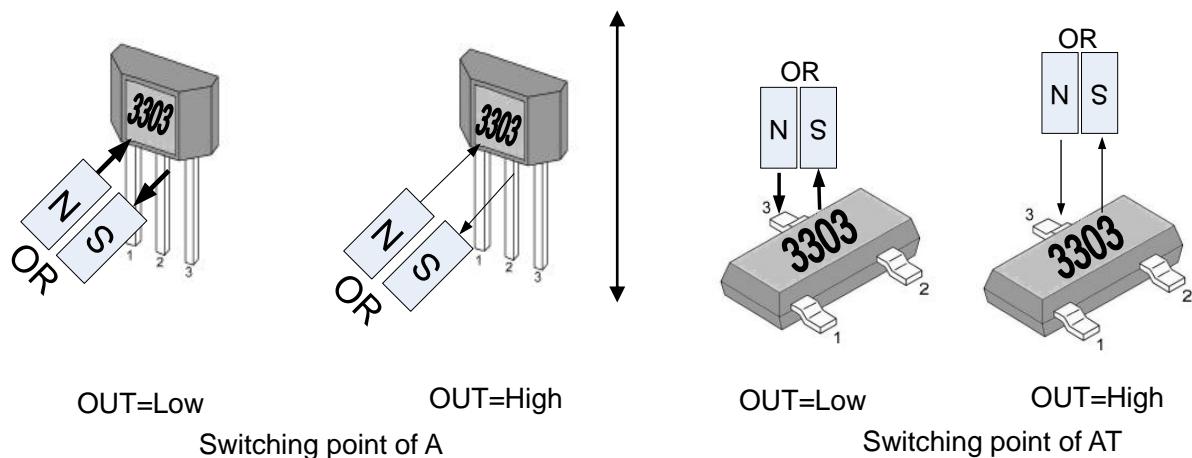

B_{OP} : Operating Point, Magnetic flux density applied on the branded side of the package which turns the output driver ON ($V_{OUT}=\text{Low}$)

B_{RP} : Release Point, Magnetic flux density applied on the branded side of the package which turns the output driver OFF ($V_{OUT}=\text{High}$)

B_{HYST} : Hysteresis Window, $|B_{OP}-B_{RP}|$

Electrical and Magnetic Characteristics

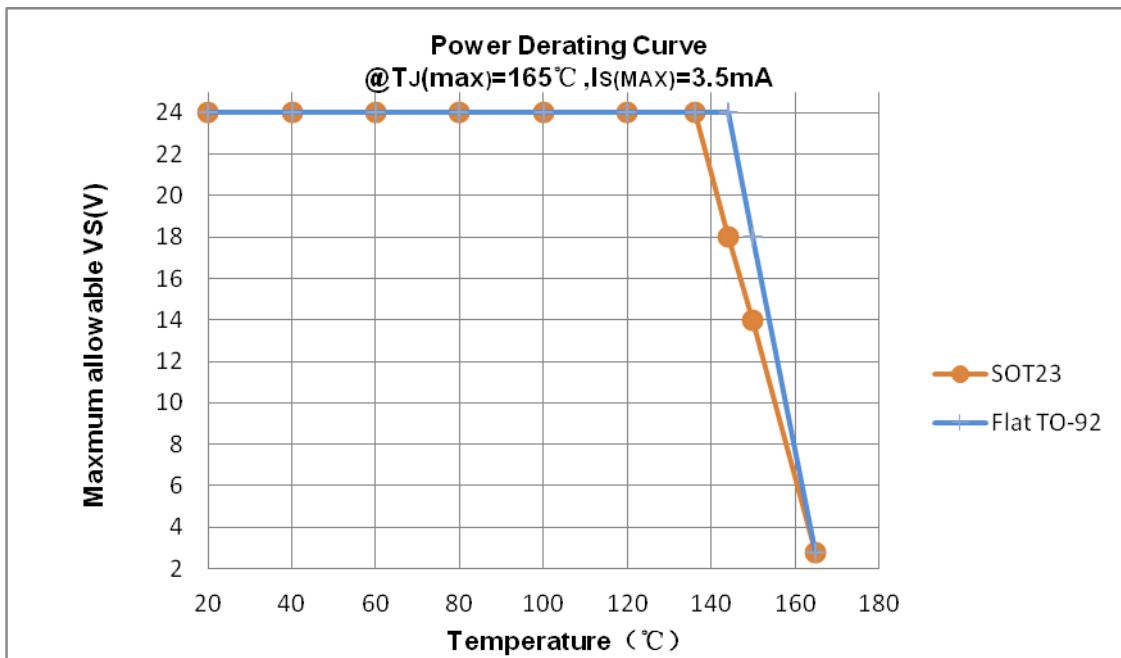

Absolute Maximum Ratings

Absolute maximum ratings are limiting values to be applied individually, and beyond which the serviceability of the circuit may be impaired. Functional operability is not necessarily implied. Exposure to absolute maximum rating conditions for an extended period of time may affect device reliability.

Absolute maximum ratings: all voltages listed are referenced to GND.
