

# WD029

CATEGORY : Alligator Clip

---

## SPECIFICATION

---

### WD029 test clips:

Daier offer many kinds of alligator clips.

Small versions, ranging in size from 15-40 mm in length, are used in electrical laboratory work.

Large versions of these clips, called automotive clips or battery clamps, are made of solid copper for low electrical resistance, and are used with thick insulated copper cables to make connections between automobile batteries.

These jumper cables are capable of delivering hundreds of Amperes of current needed to directly power an automobile starter motor, or to transfer energy from a charged lead-acid battery to a discharged one.

**Pls check the datasheet below:**

Length:	55/66mm	Color:	red/black
Current rating:	10A	Termination:	Crimp or solder
Material:	Steel	Insulation:	Insulated
